Unified BMS
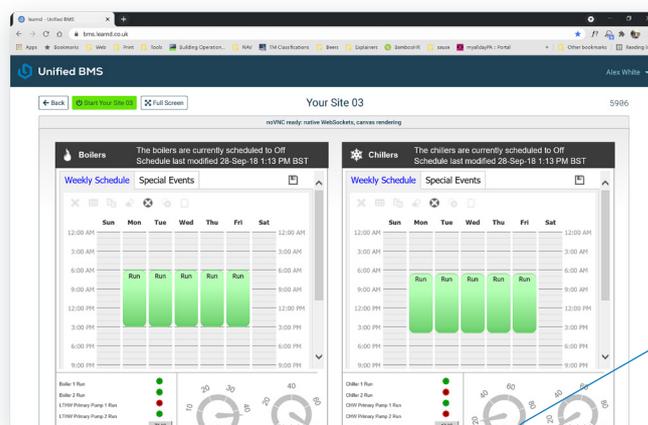

Secure, consolidated access to all your Building Management Systems

Manage all your estate's BMS from one secure central location.

Access your Building Management Systems safely and securely from one central location with learnd Unified BMS; removing the need for complex & siloed IT solutions, reducing potential security vulnerabilities, and ensuring your building operations run smoothly and safely.

Ensuring your buildings run effectively and securely might seem like an obvious concept, but it's still a huge challenge for businesses with multiple sites and complex systems in place. This is especially true when you consider the critical security needs and a legacy of disparate data storage and connectivity methods. With Unified BMS you can simplify the management of your estate. We connect all your sites to our secure platform to provide one single point of access for all your BMS.

Empower your business to get the building performance you need.

Connected Building Management

Connect your BMS and get the visibility you need across all your buildings from one central place, helping you to resolve issues faster, minimize admin & increase engineer productivity.

Secure Multi-site Connections

Take advantage of a direct, secure connection between your BMS and our Remote Operations Centre (The ROC), backed by Two-Factor Authentication (2FA) access and secure data storage.

Proven & Trusted Expertise

We're experts in critical building systems, managing thousands of sites and monitoring millions of data points for our customers every day, across the leading BMS platforms.
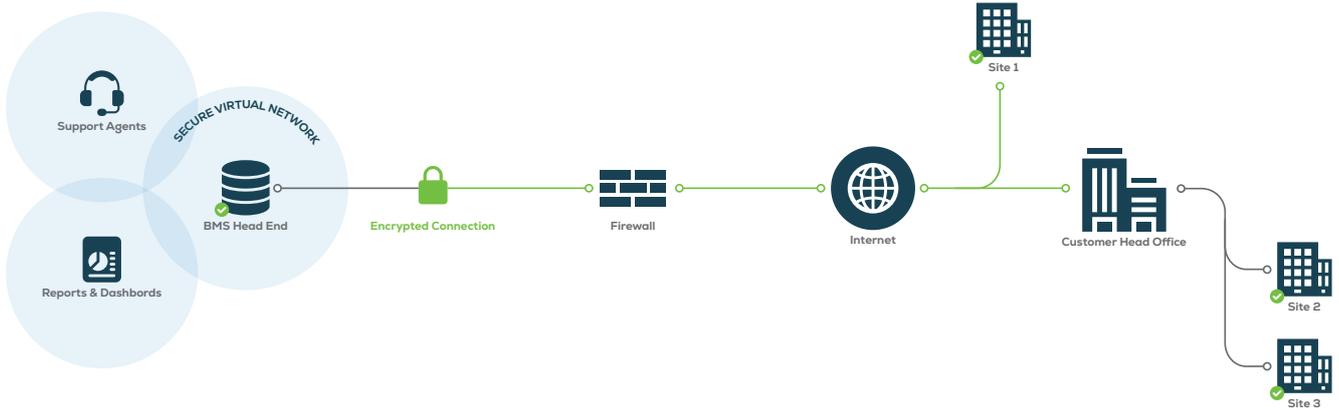

We'll take away the headache of ensuring your building operates as you need.

- Access your critical building data from one central location.
- Cut down on site visits with remote monitoring services from the ROC*.
- Centralise alarm monitoring & alerting.
- Manage BMS access requests from staff and contractors as your business needs evolve and to protect your critical operations.

Key Features.

Secure Remote Connectivity

Backed by our managed enterprise-grade infrastructure, Unified BMS removes the burden of managing hardware, storage, and software licensing for your BMS headend. Critical data is backed up and replicated, with threats mitigated by our use of secure VPN tunnel technology, helping to maintain the security of internal networks whilst providing simple access to estate-wide BMS.

Your Data, Your Way

Two-Factor Authentication (2FA) protects teams and resources, allowing you to add and remove users, and ensuring you control who has access to your information. Engage with our skilled team of BMS experts from the safety of our state-of-the-art remote operations centre (The ROC) to provide you with the support you need, when you need it.

Connection Flexibility

A choice of connection types provide the flexibility to select from either a secure, encrypted connection within your corporate network using your own IT security standards, or connection at an individual site level using our AES-256 encrypted site connection model. We can even blend both if you need it!

Connectivity

Servers, storage & networking	✓
BMS headend & software licensing	✓
Support & Maintenance options	✓
Back-up & secure VPN access	✓

Capability

Single point of access for estate-wide view	✓
Multi-site connectivity (10+ sites)	✓
Standardised reporting	✓

Support for all leading BMS platforms

Trend	✓
Tridium	✓
Siemens	✓
Schneider Electric	✓
